Compact circuit-breaker NZM up to 1600 A Compact switch-disconnectors N, PN up to 1600 A

Safe energy control, switching and control in industrial settings, buildings and machinery construction: innovative protection concept coupled with diagnostic and communication functions make it possible.

The NZM circuit-breaker assortment offers an interface for the SmartWire-Darwin communication system. → Page 17/140

Model series NZM1 – NZM4
Only four compact switches cover all applications +++ 3- and 4-pole +++ Flexible mounting through modular functions groups +++ Complete nominal current up to 50 °C ambient temperature +++ Suitable for use worldwide→Page 17/4

Door coupling rotary handles
Very wide range of variants for each application +++ All applications have identical drilling template +++ Automatic centering +++ Shaft support for years of operational safety +++ Sidewall installation for space-saving main switch installation Page 17/118

Standard auxiliary contacts, trip-indicator auxiliary contacts from the Eaton command device program.
Favorably priced identical parts from the Titan program reduce variety of types and stockkeeping +++ Installation from front to same position +++ Easy clip-in reduces assembling costs→Page 17/106

Remote operators
Unified functions concept for all variants +++ Small closing delays from 60 – 100 ms +++ Can be locked and sealed to provide safety→ Page 17/134

Diagnostics software NZM-XPC-SOFT
Diagnostics in fault scenario +++ Error-free commissioning +++ Load analysis in operation → Page 138

Eaton After Sales Service
Testing switching devices in compliance with regulations applicable to this technology→S22/2

Compact circuit-breakers and switch-disconnectors up to 1600 A

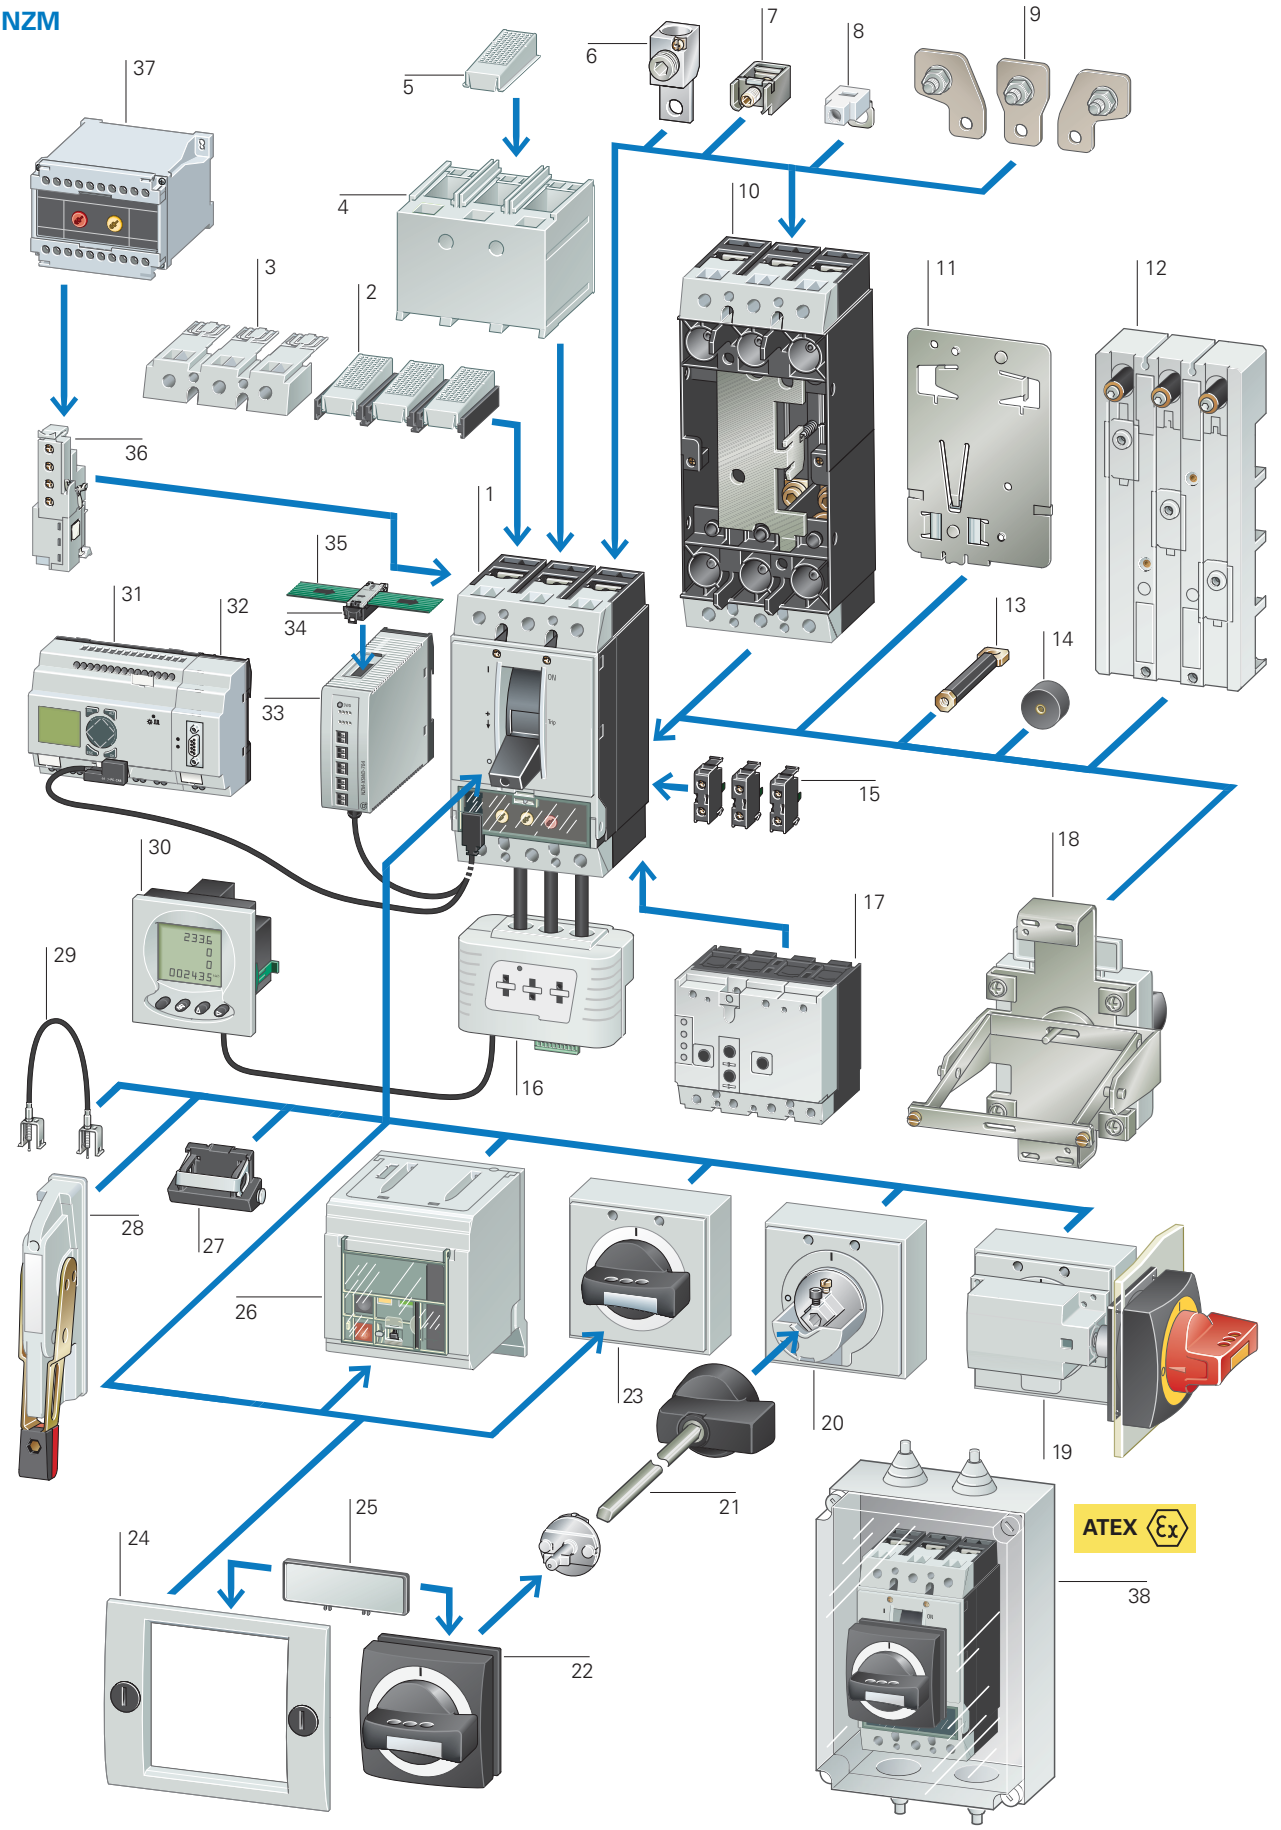
System overview

1 NZM



Basic devices

1

Rated uninterrupted current up to 1600A
Switching capacity 25, 36, 50, 150 kA at 415 V
Adjustable releases for overload and short-circuit
Adjustable time selectivity
Protection of systems, cables, motors, generators
3 and 4 pole; IEC/EN 60947

→ Page 8

Switch-disconnectors 1

Rated uninterrupted current up to 1600 A
Can be tripped remotely with undervoltage or shunt release
3 and 4 pole; IEC/EN 60947

→ Page 42

Circuit-breakers for North America 1

Rated uninterrupted current up to 1200 A
Switching capacity 25, 35, 100 kA at 480 V
Adjustable release for overload and short-circuit
Adjustable time selectivity
Protection of systems, cables, motors, generators
3 and 4 pole, UL 489/CSA 22.2 no. 5.1, IEC/EN 60947

→ Page 54

Molded case switches for North America 1

Rated uninterrupted current up to 1200 A
Can be tripped remotely with undervoltage or shunt release
3 pole, UL489/CSA 22.2 no. 5.1

→ Page 80

Add-on functions

Standard auxiliary contacts (HIV) 15

Switches with the main contacts.
Performs signalling and interlock functions

→ Page 106

Trip-indicating auxiliary contacts (HIA) 15

General trip indication '+', when tripped by voltage release, overload release or short-circuit release

→ Page 106

Early-make auxiliary contacts 36

For interlock and load-shedding circuits

→ Page 106

Voltage releases 15

Undervoltage releases
Shunt releases

→ Page 108

Insulated enclosures 38

Safety switches (maintenance and manual override switches) approved for use in potentially explosive areas in Zone 22.
Degree of protection IP66
ATEX

→ Page 142

Delay unit for undervoltage releases 37

→ Page 114

Rear-mounted drives 18

→ Page 127

Door coupling rotary handles 20 22

- Lockable
- With door interlock

→ Page 118

Main switch rotary handles for side wall installation 19

→Page 125

Extension shaft 21

Can be cut to required length

→ Page 118

Rotary handles 23

Lockable

→ Page 122

Remote operators 26

For remote switching of circuit-breakers and switch-disconnectors

→ Page 134

Residual-current protection device 17

→ Page 135

Toggle lever locking device 27

→ Page 129

Side operator handle 28

→ Page 128

Mechanical interlocks 29

→ Page 130

Communication module NZM for SmartWire-Darwin 33

For reading status data, current values, switch model and set values

→ Page 140

Measuring and communication module 16

For reading current, voltage, power and energy
MODBUS interface on board

→ Page 141

Display 30zz

Connectable to modules NZM…XMC-MB
With templates for viewing XMC readings
Indication of min. and max. values

→ Page 141

Data management interface (DMI module) 31

Access to diagnostics and operational data
Acquisition of current values
Motor starter function
Parameterization and control of circuit-breakers with electronic releases

→ Page 139

PROFIBUS-DP interface 32

→ Page 139

Mounting accessories

Connection width extensions 9

IEC/EN 60947-4-1, IEC/EN 60947-2

The circuit-breakers fulfill all requirements for utilization category AC-3.

Tripping class	Tripping time T_p with load on all poles of 7.2 times set current value.
10A	$2\ s < T_p \leqq 10\ s$
10	$4\ s < T_p \leqq 10\ s$
20	$6\ s < T_p \leqq 20\ s$
30	$9\ s < T_p \leqq 30\ s$

Selection of circuit-breakers without overload release when combining for instance with ZEV electronic motor-protective relays:

The tripping response of the motor-protective relay is matched by setting the tripping class to match the starting behavior of the motor to be protected.

Notes

Main switch characteristics including positive operation to IEC/EN 60204, VDE 0113.
Isolating characteristics to IEC/EN 60947-3, VDE 0660.
Protection against electric shock to VDE 0160 part 100.

ATEX = Atmosphères explosibles = explosive atmospheres
Eaton supplies switch-disconnectors PN1, PN2 and PN3 for a current range of up to 630 A as complete device according to ATEX Directive 94/9 EG (binding as of 06/2003).
The switches are approved for device group II, the application "everything, except for mining" and for category 3 (normal safety).
Switch-disconnectors in surface mounting enclosure with ATEX approval are used in potentially explosive dust-laden areas, such as mills, metal grinding works, wood processing operations, cement works, the aluminum industry, the foodstuffs industry, grain storage and processing plants, agriculture, and in the pharmaceuticals industry.

ATEX switches for EMC are suitable for use with screened cables.
For important general flush mounting and application notes, see the included installation instructions AWA1230-2480, which you can also download from our homepage www.moeller.net.

NZM4

	Rated current I_n A	For use with		Part no. Article no. when ordered separately	Price See price list	Std. pack	Notes
	Adapter set N(ZM)4/N(ZM)12 Not UL/CSA approved						
	Max. 1000	N4	3 pole	**N4-XAS12-1000** 285609		1 set	Conversion kit from N(ZM)12 to N(ZM)4. With the terminal lugs of the replacement kit all three-pole NZM12 and N12 can be adapted to the connection dimensions of the NZM4 or N4 supplied from model year 1983. 4 pole basic devices, withdrawable units and basic devices with remote operator can not be replaced.
	Max. 1250	N4	3 pole	**N4-XAS12-1250** 285610		1 set	Contents of replacement kits N(ZM)4-XAS12…: 3 connection extensions on outlet side 3 connection extensions on trip block side 2 mounting brackets 4 fixing screws 4 phase isolators 6 fixing screws, nuts and washers Paper drilling template in the instructional leaflet (AWA) The replacement kits have the same dimensions as models N(ZM)12…, which correspond to production status 02/97 to the present.
	Max. 1600	N4	3 pole	**N4-XAS12-1600** 285611		1 set	
	Max. 1000	NZM4	3 pole	**NZM4-XAS12-1000** 285612		1 set	Special feature: Prior to 02/97 the N(ZM)12-800 was supplied with 10 mm instead of 8 mm terminal lugs. With these models the customer must determine the device's year of manufacture by measuring the thickness of the terminal lug and order replacement kit N(ZM)4-XAS12-1250. Example: N(ZM)12-800…(1000) > N(ZM)4-XAS12-1000 N(ZM)12-800 before 02/97 > N(ZM)4-XAS12-1250 N(ZM)12-1250 > N(ZM)4-XAS12-1250 N(ZM)12-1600 > N(ZM)4-XAS12-1600 Addition for devices constructed prior to 1983! Here the replacement kit for switch-disconnectors can be used in full. For circuit-breakers with "long" ZM design, the adapter fit only at the top! At the bottom the devices are about 65 mm longer and the lower connection is about 26 mm deeper. Consequently the bottom adapters are too short and the heights do not correspond.
	Max. 1250	NZM4	3 pole	**NZM4-XAS12-1250** 285613		1 set	
	Max. 1600	NZM4	3 pole	**NZM4-XAS12-1600** 285614		1 set

Shunt releases

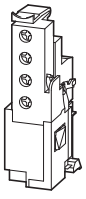
Capacitor unit 230 V 50/60 Hz in conjunction with shunt release NZM...-XA208-250 AC/DC Enclosure: degree of protection IP20 Not UL/CSA approved			Enables the reliable use of circuit-breakers as mesh network circuit-breakers in the range from U_n with 0 % constant switch-off time of 40 ms. If the mains voltage is absent, the installed capacitor supplies power for actuating the shunt release for at least 12 hours.
NZM1(-4), N(S)1(-4) NZM2(-4), N(S)2(-4) NZM3(-4), N(S)3(-4) NZM4(-4), N(S)4(-4)	**NZM-XCM** 229413	1 off	The capacitor unit is arranged independently of the circuit-breaker. Connect NZM - XCM to the power feed side. Note on engineering: Connect a standard auxiliary contact (HIN) as N/O in series with the coil of the shunt release! Standard auxiliary contact not included as standard.

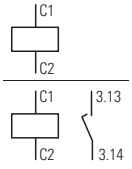
	Part no. Article no.	Price See price list	Std. pack	Notes
	With screw terminal			

Shunt releases

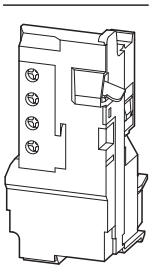
For mesh network circuit-breakers
For intermittent operation
Maximum On-time = 1 s
Operating range 10-110 % U_s
Not UL/CSA approved

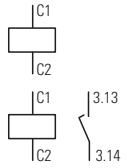
Rated control voltage
230 V AC
For use with
NZM3(-4), N3(-4) and NZM4(-4), N4(-4)
Cannot be installed simultaneously with early-make auxiliary contact NZM...-XHIV... or undervoltage release NZM...-XU... .
Intermittent operation guaranteed by series connection of a make contact M22-(C)K10.
The maximum duty factor of the shunt releases for mesh network circuit-breakers is 1 s.



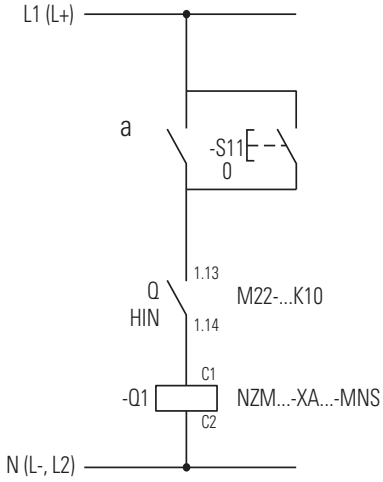


Without auxiliary contacts	**NZM3-XA-230AC-MNS** 274097	1 off
With early-make auxiliary contact	**NZM3-XAHIV-230AC-MNS** 274141	1 off





Without auxiliary contacts	**NZM4-XA-230AC-MNS** 274138	
With early-make auxiliary contact	**NZM4-XAHIV-230AC-MNS** 274143	1 off



NZM...-XAHIV:

Cannot be used in conjunction with remote operator NZM...-XR....
NZM3: Early make of auxiliary contact on switching on and off (manual operation): approx. 20 ms.
NZM4: Early make of auxiliary contact on switching on (manual operation): approx. 90 ms.

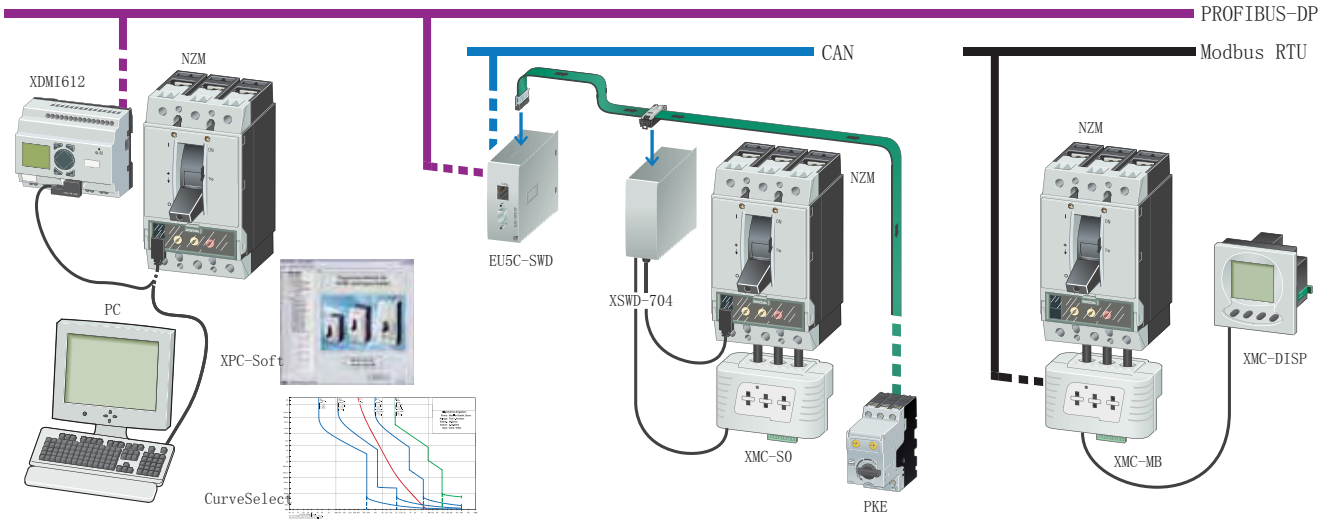
1 Description



Overview
Forthecompactcircuit-breakers NZM Eaton supplies the following energy measurement and communication components:
- NZM-XPC-Soft: Diagnostics software
- CurveSelect: Software for viewing characteristic curves
- NZM-XMC-S0: Energy measuring module
- NZM-XMC-MB: Measuring and communication module
- NZM-XSWD-704: Communication interface for SmartWire-Darwin with SO input for energy data
- NZM-XDM1612: Data management interface with field bus connection for PRDFIBUS-DP and bus diagnostics software

XPC-Soft
Circuit-breakers NZM with electronic trip block provide all required diagnostics data directlytothe USB or COM interface of a connected PC through a built-in interface.
On overload or short-circuit, the NZM instantly switches off the system and, if a PC is connected, documents the events complete with date and time.
With the software XPC-Soft, users can viewthe history and analyze possible causes. The software can also output power consumption trend graphs as MS Excel table

CurveSelect
Thefree characteristic curve program Moeller CurveSelect allows a settings-specific representation of the tripping characteristics of several protective devices with the same time and current scales.
This clearly simplifies an assessment of the interaction of Eaton's circuit-breakers NZM and IZM, motor-protective circuit-breakers PKZ, overload relays ZB, miniature circuit-breakers, and LV h力.c. fuses.
Available for free download from www.moeller.net:
Products&Solutions>Power Distribution>Switching and Protecting Power > CurveSelect: Characteristics program for short-circuit- and overload protection.

Measuring and communication module
For measuring and optimizing energy consumption, Eaton provides module NZM-XMC. This compact device with built-in current converter determines the power and energy values per phase from the measured voltage and current. The module can operate the circuit-breaker through a remote operator. The data is made available on the MODBUS RTU.
With the XMC applications up to 500 A can be operated; the readings have a high accuracy of 0.5 %. Cables, strip or bar can be used. The conductors pass through a tunnel in the device and do not have to be severed. An optional external door display provides real-time local indication of the measured values

Communication interface for SmartWire-Darwin
For remote diagnostics of the circuit-breaker, communication module NZM-XSWD-704 is used. With this module, the switch settings, trip causes, and actual currents can be transmitted to a field bus through SmartWire-Darwin. The circuit-breaker can therefore also be operated through SmartWire-Darwin, like the electronic motor protection PKE and the typical devices such as RMQ and D比.
As a special feature, the XSWD features a built-in power meter, which can be supplied from an external energymeasurementmoduleXMC-S0. This provides everything that is necessary for optimizing energy usage.
With the data from the XSWD-704 all relevant information about energy supply or the respective outgoer on the desiredfield bus are available.This allows visualization and logging of the machines or system components.
For visualization, the free software BreakerVisu can, for example, be used, available for download from www.moeller.net:
www.moeller.net, Products& Solutions>Power Distribution> Switching and Protecting Power Distribution>Moeller BreakerVisu: Visualization for circuit-breakers

Data Management with PRDFI-BUS-DP interface
An alternative to the XSWD-704 is provided by data management interface NZM-XDM1612 with a field bus connection for PRDFIBUS-DP
The advantages of this solution are
.For motor starter applications a ZMR function is available that does not trip the circuit-breaker in the event of an overload butthat deactivatesthe contactorthrough the DMI.
.The built-in display provides a local indication of all parameters of the circuit-breaker.
.The DMI can change the circuit-breakers'tripping parameters. (remote parameterization)
.The DMI's six inputs and six outputs can be used for remote control and for any user functions.
.Through the outputs a "Tripped" signal can be issued locally.
.A central diagnosis across the entire bus to the FDT standard can be implemented through the DMI withthe DPV1 module. Forthis purpose, software NZM-XPC-DTM and, in some cases, FDT-FAVIGATOR are required.

Diagnostics and configuration software for NZM and DMI (local)					
	PC software for direct connection to all new NZM circuit-breakers with electronic releases pEC and UL/CSA devices) or for direct connection to the DM I module, including the required connection cable to NZM. • Protection parameter: online display and curve display, export option to curve characteristics program "Moeller CurveSelect". • Warning and release messages: reading of diagnostic memory also in voltage-free state. • Load currents: display and trend indication. • Recording and export options to Excel for load currents and diagnostic messages. • Configuration of the DMI: motor starter, remote operator, assignment of the DMI inputs and outputs and displays.	**NZM-XPC-KIT** 265631		1 off	Only for use in combination with circuit-breakers with electronic releases. Download the manual AWB1230-1459 and demo-software at www.moeller.net. Order connecting cable to DMI separately: EASY-USB-CAB.
Connecting cable PC (USB) to DMI					
	• Fortransmission of DMI configuration between PC with XPC-Soft and DMI • For upgrading DMI firmware	**EASY-USB-CAB** 107926		1 off	Can also be used for programming easy small controllers.
Data management interface (DMI modulel					
	• Access to diagnostics and operational data. • Recording current values, motor starter function, and setting parameters. • Control of the circuit-breakers with electronic trip block. • Comprehensive remote diagnostic options and remote operation via fieldbus in combination with a field Bus connection	**NZM-XDMI612** 260217		1 off	Includes connection cable NZM-XDM ⊢CAB between NZM and DM (length: 2 m). Onlyfor use in combination with circuit-breakers with electronic releases
Fieldbus interface for DMI					
	Connection to the DMI module • Transfer of phase currents, parameter data, status data and diagnostics data. • Transfer of circuit-breaker position (wiring of auxiliary contacts to DMI inputs. • Actuation of the DM I motor starter functions and the NZM remote operator. • Detection of digital inputs and actuation via field Bus. • PRDFIBUS-DPV1-Slave fieldbus interface. Can be operated with class 1 and class 2 masters. Addresses available: 1 to 126	**NZM-XDMI-DPV1** 270333		1 off	Connected to the DMI module and has the same contour appearance.
Switched-mode power supply unit For DMI module					
	• Rated input voltage: 50/60 HZ: 115/230 V AC • Rated output voltage (residual ripple) 24VDC/13%) • Rated output current: 1.25 A	**EASY400-POW** 212319		1 off	
Telescopic adapter For DMI module For equalization of the mounting depth when rear mounted in CI-K... enclosures and cabinets					
	W ith 35 mm top-hat rail IEC/EN 60715, adjustable from 75—115 mm. Screw and snap fitting.	**M22-TA** 226161		1 off	

Information relevant for export to North America	Product Standards	IEC/EN 60947-5; UL 508; CSA-C22.2 No. 14-05; CSA-C22.2 No. 94-91; CE marking
	UL File No.	E29184
	UL CCN	NKCR

	Description	Part no. Article no.	Price See price list	Std. pack	Notes
FDT frame software for operating field devices					
	PC software for integration of software modules (DTM's) according to the FDT standard V1.2 (e.g. NZM-XPC-DTM). • Operation of a temporary or stationary service station for engineering, remote diagnostics, remote operation and remote parameter definition of networked switchgear and field devices. • Engineering of the network topology of networked field devices. • Overview representation of the topology with online status information. • Access to the device-specific DTM's for configuration, operation, parameterization and diagnostics of the devices.	**FDT-NAVIGATOR** 281623			The connection of the field devices can be implemented via the PROFIBUS DPV1 master or via gateways (e.g.: USB/PRDFIBUS, Ethernet/ PROFIBUS). Communication interfacing for the PC and a communication DTM (driver) is necessary for this purpose.
DTM software module to FTD standard					
	PC software module (Device Type Manager) to FDT/DTM standard V1.2 for integration in the FDT navigator or other FDT-capable framework software packages (primary control system, PLC engineering systems. • Remote diagnostics, remote monitoring, remote parameter definition and remote operation of the new NZM2,3,4 circuit-breakers with electronic trip release via PRDFIBUS-DPV1. • Indication of the circuit-breaker state (on/off/tripped, the phase currents, parameter data, status data and diagnostics data. • Definition of the trip parameters. • Display and setting the DMI motor starter functions and assignment of the DMI inputs and outputs. Control of the motor starter functions	**NZM-XPC-DTM** 281624		1 off	For connection of the circuit-breakerto the PRDFIBUS-DP fieldbus,the accessory device NZM-XDM1612 and the fieldbus interface NZM-XDMI–DPV1 are required.
NZM interface module to SmartWire-Darwin					
	The module implements the data connection between the NZM2/3/4 with electronic release and SmartWire-Darwin. The following data is transmitted: • Digital status data (ON/OFF/Tripped) • Load warnings • Reason for last trip • The actual currents • Switch model • The current settings of the rotary coding switches The switch can also be operated with a remote operator. • Two digital inputs for the switch status • Two transistor outputs for remote switching • Retentive memory for energy data (kWh) Energy data is transmitted through digital input(S) from an external energy measuring module NZN...-XMC-S0.	**NZM-XSWD-704** 135530		1 off	A connection cable to the circuit-breaker and auxiliary contacts NZM is included as standard.

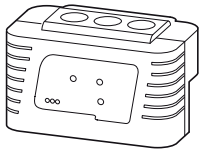
Energy measuring module

Energy measuring module
For measuring the electrical active energy.
The module has three built-in current transformers and three voltage taps, which contacted with self-tapping screws that penetrate the cable insulation.
Power supply 24 VDC
The module supplies S0 pulses, which can be counted with an external device.
One pulse output for active energy. The pulse rate is fixed.



Number of conductors	Description	For use with	Part no. Article no.	Price See price list	Std. pack	Notes

Notes

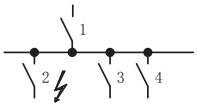
Enclosures for separate mounting with top and bottom cable entry, suitable for installation of
circuit-breakers and switch-disconnectors.
Include fixing straps for wall mounting.
Short-circuit resistance at 415 V 50/60 Hz up to 10 kA.

Cannot be used in combination with remote operator NZM...-XR
plug-in unit NZM...-XSV or withdrawable unit NZM...-XAV.
Order insulated additional terminal for 4th or 5th pole separately

Enclosure C ⊢K5 with hard metric knock-outs
Enclosure CI23 with flanges
C143, CI45 and C148 feature gland plates.

Only for switches with box terminals for direct connection of cables.

1 NZM,FAZ-B(C),PKZ Engineering



Incoming circuit-breaker
Outgoing circuit-breaker

Selectivity 415 V AC

between circuit-breakers enables separate shut-down of faulty system sections.
Selectivity (discrimination) exists between incoming breaker 1 and outgoing breaker 2 if, only outgoing breaker 2 trips at position 2 during a short-circuit.
System sections 3 and 4 continue to be operational.

Incoming circuit-breaker (S1)

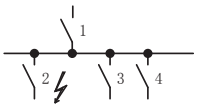
1 NZM



Incoming circuit-breaker
Outgoing circuit-breaker

Selectivity 415 V AC

between circuit-breakers enables separate shut-down of faulty system sections.
Selectivity (discrimination) exists between incoming breaker 1 and outgoing breaker 2 if, only outgoing breaker 2 trips at position 2 during a short-circuit.
System sections 3 and 4 continue to be operational.

Protection of PVC insulated cables against thermal overload dueto short-circuits

According to VDE 0100 Part 430 Wiring Regulations, cables and conductors must be protected from overload and short-circuits. In circuit-breakers NZM, overload protection is implemented through the adjustable, current-dependently delayed overload release.

Short-circuit protection is provided by adjustable instantaneous releases, which open the main contacts in less than 25 ms. The short-circuit total opening time restricts the temperature rise of the cable to a minimum.

The tables indicate the minimum conductor cross-section reliably protected by circuit-breakers during a short-circuit.(Operating voltage U_N= 415 V)

	Minimum protected cross-section mm² copper
NZM...1(-4)-...20	6
NZM...1(-4)-...25 – 160	10
NZM...2(-4)-...20 – 300	10
NZM...3(-4)-...250 – 630	16
NZM...4(-4)-...630 – 1600	95

Where the prospective fault current at the mounting location of circuit-breakers is very high current-limiting circuit-breakers NZMN(H) are normally used. A cost-effective alternative if the fault level is too high for circuit-breakers NZMB(C)(N) is to fit a current-limiting circuit-breaker NZMN(H) upstream of an arrangement of standard circuit-breakers NZMB(C)(N).

The table shows which current-limiting circuit-breakers NZMN(H) provide reliable protection at network locations with high short-circuit ratings in combination with NZMB(C)(N).

The selectivity limit is determined by the response current of the non-delayed short-circuit release in the upstream incoming circuit-breaker. In many applications this is sufficient.

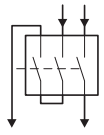
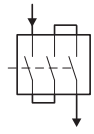
Notes

1) Details apply for 3 pole system protection circuit-breaker with thermomagnetic release NZMN(H)1(2)(3)-A... up to 500 A.
For rated operating voltage switching on 3 contacts the following applies
DC correction factor for instantaneous release
response value NZM1: 1.25, NZM2: 1.35, NZM3: 1.45
Setting for I_i at DC=setting I_i AC/correction factor DC

Switching of one pole via two series contacts



Switching of one pole via three series contacts



2)

2)>800 A=525

Notes

If temperatures deviate from the reference temperature, a slight change of the overload protection properties occurs. To determine the response time from the tripping characteristics, the temperature compensation coefficients listed in the table must be considered.

Example:

An NZM1-A100 is calibrated for a reference temperature of 40 °C.

What happens when it is operated at an ambient temperature of 60 °C?

At 60 0C, the temperature compensation coefficient of 0.86 results in a reduced operating current of I_r=100 A x 0.86 = 86 A. In other words at an ambient temperature of 60 0C the NZM1-A100 trips as if it were set to 86 A.

Device part no	Release type	Response time of the overload release at temperatures deviating from the reference temperatures Temperature compensation coefficient 20 °C	30 °C	40 °C	50 °C	60 °C	65 °C	70 °C

Notes

In determining the maximum permissible current loads at different ambient temperatures, the derating coefficients listed inthetable must be considered.

Example:

An NZM2-A250 should be operated at an ambient airtemperature of 65 °C.

How high is the permissible rated operational current I_e?

At 65 0C the derating coefficient is 0.85, i.e.I_e=250Ax0.85=212.5 A.

At an ambient temperature of 65°C the NZM2-A250 can therefore be operated at up to I_e=212.5 A.

NZM1, NZM2, NZM3, NZM4

Notes

In determining the maximum permissible current loads at different ambient temperatures, the derating coefficients listed in the table must be considered.

Example:

An NZM2-A250 should be operated at an ambient air temperature of 65 °C.

How high is the permissible rated operational current I_e?

At 65 °C the derating coefficient is 0.85, this means I_e=250Ax0.85=212.5 A.

The NZM2-A250 may be operated at an ambient temperature of 65 °C with a maximum I_e=212.5 A.

Notes: The values stated in the table apply for 3 and 4 pole fixed mounted devices with an equal load distribution.
On 4 pole devices the current in the neutral conductor is equal to zero
The total resistive load is the measured value for a 3 pole or a 4 pole switch(independent of I} and the type of release.

Thetotal resistive load for a switch orwithdrawable plug results from the resistive value for fixed mounting+resistive value for plug-in orwithdrawable.
The heat dissipation can be calculated with the formula: $P=3xRxI^2$

Eaton is dedicated to ensuring that reliable, efficient and safe power is available when it's needed most. With unparalleled knowledge of electrical power management across industries, experts at Eaton deliver customized, integrated solutions to solve our customers' most critical challenges.

Our focus is on delivering the right solution for the application. But, decision makers demand more than just innovative products. They turn to Eaton for an unwavering commitment to personal support that makes customer success a top priority. For more information, visit www.eaton.com.cn/electrical.
